

# B-407-TG Series Options

- > You may upgrade the standard 32"Ø reducer and cover to a 36"Ø on any sump.
- > Oversized 56"Ø sumps are available. Contact the factory to inquire.
- > CTW (Twist Lock) and CL (Latched) cover models have been replaced with the SNAP-LOCK series of covers as standard options. This cover is superior to any other cover currently available due to the vertical o-ring seal in place of basic and problematic compression gaskets which even our old covers featured. Though to be fair, we minimized the potential for them to be damaged. You may recall our launch of the SNAP cover, which did not feature cam-lockdown handles. That too has been discontinued. Where that cover had a requirement for U/G ventilation to the outside air, the SNAP-LOCK variant has no such conditions or requirements. Read all about it at [sbravo.com/snap](http://sbravo.com/snap) or see a video at [sbravo.com/videos](http://sbravo.com/videos)
