

Part #: **B1000-E-EN**

The B1000-E Series is offered exclusively by Bravo. It features electrical offsets on both ends of the UDC providing needed flexibility with modern station designs. The reduced metal work is galvanized while the splash lip is FRP. This gives the B1000-E Series a distinct corrosion advantage over other designs. With a width of 28", the B1000-E Series also offers more room inside the UDC for components. The B1000-E Series efficient design makes it one of the most cost competitive UDC's on the market today. It features a 10-year corrosion warranty and has comparable pricing to polyethylene UDC's. The B1000-E Series is constructed from fuel compatible resin that doesn't require gel coat for corrosion resistance. This reduces the time and labor required to install rigid FRP entry fittings.

SIZES

28" Wide at Base

MATERIAL

Fiberglass

Galvanized steel

Quality FRP material won't deform like polyethylene

SPECIFICATIONS:

- 10-year corrosion warranty
- No need for gel coat
- Electrical Offset (EO) system provided on both ends
- Room for up to 10 conduits
- Available for all common dispensers
- Pre-plumb options available
- Roomy, wide-bottom accommodates tees and reducers
