

Part #: RCP-RF-SL32

The bonded retrofit reducer can be easily bonded to most polyethylene tank sumps. The reducer includes an integrated high pressure vertical o-ring seal which stays water-tight under 5' of water. Bravo's PE adhesive and FRP epoxy are included to complete the seal and a lasting water-tight solution.

The lid is sealed simply by stepping on it. The snap-lock lid features 4 handles that when turned to the lock position, prevent the lid from opening and breaking the seal. The integrated vent cap contains a semi-permeable membrane that will vent vacuum and pressure without allowing fluid to pass through. This limits the possibility of vacuum making the lid difficult to open.

SIZES

32" diameter cover with flanged options

MATERIAL

Tank-Spec Fiberglass

SPECIFICATIONS:

- FRP quality construction
- Durable high-pressure water-tight vertical o-ring seal
- Simple step-to-seal design
- Rugged all-grip, no-slip surface
- Dual stainless-steel handles
- Easy to operate
- No parts to misplace or break
- No nuts or bolts to corrode or seize
- Anti-water PV valve prevents pressure or vacuum from building
