F-SERIES MULTI-PORT

Adhesive Injection Port always installed at 12 'o-clock

Dual test ports at 9 and 6 'o-clock

The Multi-Port F-Series entry fitting has two test / drain port locations. One at 9 'o-clock and one at 6 'o-clock. This allows installers to choose the position that is compliant with their local regulatory requirements.

Primary passes through fitting for testing, while not permanently installed. After primary passes testing, the primary is then sealed to the fitting by adhesive injection.

The secondary is then sealed and tested.

RECOMMENDED TOOLS FOR INSTALLATION: Refer to Instruction Manual

- T-FS-SAND-GUN Sanding Gun (5/8")
- T-FS-SAND-KIT Steel disc set for fittings
