

Product Shown  
Custom Conversion Frame

## About the Conversion Frames

Conversion frames are used to adapt new dispensers to existing under dispenser containment sumps and provide proper containment of the hydraulic cabinet, regardless of the opening of the containment in the ground. The universal design requires no surveying of the site ahead of time. The only information needed is the model of the new dispenser being installed and the universal frame is modified in the field to accommodate the existing UDC. Custom fabricated all steel frames are available for uncommon applications.
