EV CHARGER MOUNTING FRAME

The Bravo EV Charger Mounting Frame simplifies charger and power cabinet installation, saving time and energy. Set the form at grade, level, and pour!

UNIQUE BENEFITS:

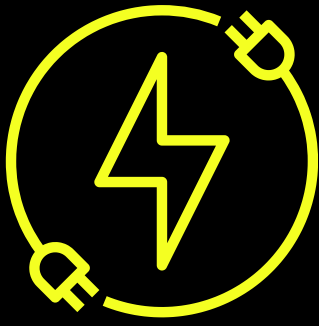

- ✓ Eliminates the need for precast or custom concrete vaults under the charger
- ✓ Provides charger mounting points and strut to secure conduits
- ✓ Open bottom provides superior drainage

Innovative solutions you can trust

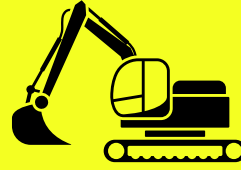

PRODUCT INFORMATION

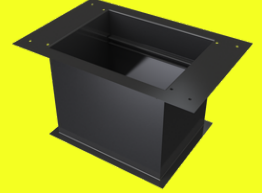

EV chargers and power cabinets are supplied power from electrical conduits run underground. This requires a vault beneath them for wiring connections and access for maintenance. The industry norm is to construct a custom concrete box below grade to mount the charger to. This is expensive and time-consuming.

FEATURES

- ⚡ Easy to set and level inner concrete form tailored to any charger model
- ⚡ Constructed of heavy-duty epoxy coated steel for corrosion resistance and secure charger mounting
- ⚡ Raised splash lip not only sheds water, but provides an aesthetically pleasing installation as it simplifies concrete finishing
